TITLE: Core-sheath type composite fibre of
nylon and polyester e.g. for ski wear - comprises sheath
component of poly:hexa:methylene di:amine
copolymerised with epsilon-caprolactam, and core
component of polyethylene
amount of phthalate copolymerised with specific
5-sulpho:isophthalate

BASIC-ABSTRACT:

The composite fibre comprises sheath component of a
polyhexamethylene diamine
copolymerised with epsilon -caprolactam, and core component
of a polyethylene
phthalate copolymerised with K mol% of

5-sulphoisophthalate, satisfying the following equations: $5.2 - 0.08R$ at most K at most 9.2 - $0.08R$ (I); (15 at most R at most 40 (II) (where R wt.%).

Preferably the sheath component does not preferably contain substantially delustering agent of titanium oxide. The composite fibre is dyed with a cationic dye to dye the core component and not to dye sheath component.

USE - The component fibre is used for clothes having a clear dyed colour, e.g. for ski wear, swimming wear, casual wear, etc..

ADVANTAGE - The composite fibre has a clear dyed colour, dyefastness, durability for washing, and improved peeling strength for the core component and the sheath component.
